TM Procurement

Take back control of your procurement process.

TM Procurement lets you eliminate approval bottlenecks, get better prices, and ensure everyone has the information they need — onboard and onshore

TM Procurement enables you to:

- + Speed up your approval process
- + Reduce administrative workload
- + Choose the best suppliers
- + Reduce the time between requisition and delivery
- + Optimise your procurement process to save time and money

*Better information
— with fewer emails
and phone calls*

Clear bottlenecks and speed up processes

Our intelligent approval flows reduce administrative burdens by automating regular processes, alerting users and approvers to the work that needs to be done, and guiding users to make the correct selections based on company policy – reducing the time spent manually approving requisitions, invoices and payments.

Reduce admin

Through automated three-way document matching, orders are automatically compared against what was marked as received and what was invoiced for. With discrepancies instantly flagged, teams can quickly identify and address any issues, find a resolution, and reclaim the time they would otherwise spend chasing, reviewing and signing off documents.

Access more suppliers, faster

Quickly send RFQs to multiple vendors and track quotes as they come back. Native integrations with e-commerce platforms such as ShipServ, ensure you have easy access to a wider range of suppliers whenever you need them.

Compare prices like-for-like

TM Procurement factors in shipping costs, taxes and currency conversions when you are evaluating quotes – enabling a true side-by-side comparison that helps you to prioritise by convenience, cost, or a combination of factors, when selecting your supplier.

See what matters to you

Teams can see, at a glance, the status of orders, any overdue items and what needs urgent attention – without being overwhelmed with information.

Dashboard views give stakeholders the information they need without having to search their inboxes or pick up the phone.

Deal with fewer emails

Reduce the back-and-forth of chasing for approvals, payments and documentation. Each step of the procurement process is visible in one platform, ensuring teams have the information they need, whenever they need it, from a single point of truth.

Match stock levels to maintenance needs

Spares and consumables needed for upcoming jobs are automatically factored into stock levels, enabling teams to hold optimal inventory levels at all times, while ensuring that critical spares will be available in the right place at the right time.
